WHO WE ARE

IO® is the registered trademark at European level of the mixers designed and produced by GME División Baños S.L. With more than 30 years of experience in the design and distribution of products for the integral conditioning of the bathroom.

The group develops two general lines of business, one of which acts as a delegation of first-tier manufacturers, the other manufactures and markets products under the GME and IO brands.

PHILOSOPHY

Thanks to our permanent contact with customers through our extensive sales network, we develop the product lines to be marketed to meet the current market needs, always trying to improve the existing offer in terms of price, quality and service.

PRODUCT

IO by GME has all the necessary mixer lines for bathroom and kitchen fittings, with a wide variety of formats and colours following the latest market trends.

GUARANTEE

The quality levels of our products allow us to extend the guarantee established by law to 5 and 7 years (depending on the product). This guarantee does not cover misuse or mismanagement or any other damage to the components of the product.

SERVICE

Our 25,000 m² warehouse allows us to have a large stock of all the references in our catalogue. This, together with our commitment to prepare your orders the same day they are received, means that delivery times, under normal conditions, do not exceed 72 hours.

All this makes it possible to fulfill our objective:
"Quality has a price".

COMMERCIAL GUARANTEE

PREMIUM GUARANTEE

CERTIFICATES AND GUARANTEES

All our taps have been tested to guarantee their quality and compliance with European standards.

List of tests carried out:

- Verify the corrosion resistance of the Nickel/Chrome coating, according to EN 248, salt spray test (at least 200 h).
- Jet dispersion test according to UNE 19703.
- Water flow test, maximum flow rate (l/min), to verify consumption, as well as the difference in flow rate with and without aerator, to verify the difference. According to EN 817.
- Tightness test, according to EN 817, to verify that it complies with the tightness, that its seals are reliable.
- Test of mechanical resistance to pressure, according to EN 817, to verify that the design is mechanically resistant to high pressures.
- Torsional rigidity test of the control device, according to EN 817, to verify that its operating mechanism complies with the specifications.

ASSOCIATE N° 11666

Concerned about the quality we offer our customers, GME DIVISIÓN BAÑOS SL has certificates that guarantee the quality of all its products, which comply with all European regulations.

At the same time, GME DIVISION BAÑOS SL is associated with the AIDIMEE technological institute, where inspections and laboratory tests are carried out to guarantee the quality and proper functioning of the products we offer.

“The advantages of a thermostatic without its disadvantages”

Cold opening system

This simple system achieves considerable energy savings, as the hot water consumption will only be activated when it is really necessary. The boiler or water heater will not turn on until you really want a hot shower, so in addition to saving energy and money, you will leave a smaller carbon footprint during the daily shower.

INVERTER Distributor

Our INVERTER showers are designed with a 3-position cartridge (shower handle, spray and closing), working in a similar way to thermostatic shower mixer but without the typical problems caused by hard water, pressure differences, etc.

This cartridge allows you to leave the position of the single lever mixer at your comfort temperature and take a shower just by using the distributor to connect the shower head or handshower or to close it at the control panel. All this, together with an elegant, minimalist and modern design, plus telescopic bar, sliding support in height and standard 250 mm ultra-slim shower head, give INVERTER a great competitive advantage over similar products.

Thermostatic system HI-TECH

The thermostatic showers of GME's Elite series have the following characteristics, which give them superior reliability and performance:

- Anti-scalding system to prevent abrasion when in contact with the body of the fitting.
- EcoStop system, which saves up to 40% in water consumption.
- Self-cleaning cartridge, easy to disassemble, with state-of-the-art Vernet sensor.
- Safety button that keeps the temperature constant with greater accuracy, at a maximum of 38°.

In addition to all this, the elite range has a height-adjustable stand, telescopic bar, and 25 cm ultra-slim spray head.
